Check you inbox for password reset link

← Back to login 3

Component and Interactions annotations:

1. Email field
2. Send reset link button
3. Notification for password reset link

Navigation flow from this screen:

Forgot password → Login via “Back to login” link
Email link click → Set new password

- Component and Interactions annotations:
- 1. “+ New event” button – primary CTA. Navigates to the Create Event screen. Positioned top-right for visibility.
 - 2. Stat cards - read-only summary metrics: active events, total participants and submissions today. Auto-refreshed on load.
 - 3. Active events list - shows live and upcoming events with team count and remaining time. Clicking a row opens “Manage & Edit” for that event.
 - 4. Recent submissions table - real-time feed of the latest scored and errored submissions with status badges (green = scored, red = error).

Navigation flow from this screen:

Admin dashboard → Create event via “+ New event”

Event row → Event detail/live ops via click on any event

Save draft

Next: Levels & Files

- Component and Interactions annotations:
- 1. Basic information section - required fields: event name, start date/ time, duration, team size range. All fields validated before proceeding.Visibility toggle
 - 2. Visibility toggle - mutual-exclusive selector. Public = open registration; Private = requires registration key. Selection determines downstream registration flow for participants
 - 3. Next: Levels & Files - multi-step form navigation. Saves current section and advances to the levels configuration step. Save draft persists without advancing.

Navigation from this screen:
Create event (step 1)→Levels & Files (step 2)→Review & Publish/Save draft → Events list

Component and Interactions annotations:

1. Search field - live text filter on event name and category. Filters the table rows in real time without a page reload.
2. Filter dropdowns - compound filtering by status (Live / Upcoming / Ended) and visibility (Public / Private). Dropdowns compose with the search field.
3. Manage & Edit - goes to the Levels & Files page where admins manage the content of the hackathon.

Navigation flow from this page:

Events list → Manage & Edit → Levels & Files page

Component and Interactions annotations

- 1. “+ Add level” (top) - primary CTA duplicated for quick access. Opens a modal to define a new level name, difficulty, and scoring parameters.
- 2. Level rows - each row represents one event level with name and difficulty. Rows are draggable to reorder; order determines participant progression sequence.
- 3. Manage Files - opens a file management view for the selected level where the admin can upload/replace input data, resource archives, and the problem statement PDF.
- 4. + Add new level (inline) - alternative inline trigger at the bottom of the list. Provides the same action as the header button for quick sequential level creation.

Navigation flow from this screen:

Levels & files→Edit level (modal)

Manage Files→File upload view

Component and Interactions annotations:

1. Live charts - submissions-per-minute bar chart auto-refreshes every 30 seconds. Score distribution histogram shows spread of team scores across the scoring range.
2. Live operations panel - quick-action buttons for common admin interventions during the event. Each action triggers a confirmation dialog before executing.
3. End event - destructive action (red) in the header. Immediately closes submissions and finalises the leaderboard. Requires a confirmation step to prevent accidental clicks.
4. Stat cards - registered teams, active teams in the last hour, total submissions, and time remaining. All update in real time without page reload.

Navigation flow from this page:

Live ops → Action button

Confirm dialog → State change applied

- Component and Interactions annotations:
- 1. Upload solver version - drag-and-drop or browse for a .py, .jar, or .zip solver file. Version label and change notes are stored for audit history.
 - 2. Upload & activate - deploys the uploaded solver and immediately makes it the active scoring engine. Previous version is deactivated but retained in history.
 - 3. Version history table - lists all deployed solver versions with run count, average runtime, and error rate. Allows rollback to a previous version if needed.

Navigation flow from this screen:

Solver management→Upload file→Upload & activate→Version history updated

Upload new version

Filter by team...

ID	Team	Level	Score	Status	Runtimesubmitted		Actions	
#4821	ByteForce	Level3	94,210	Scored	1.8s	2m ago	Logs	DL

2

Component and Interactions annotations:

1. Filter controls - compound filters by level, status (Scored / Error / Scoring), and team name. Filters combine to narrow the submission table in real time.
2. Actions column - Logs opens the scoring log inline; DL downloads the original source code archive submitted by the team for manual review or dispute handling.
3. Upload new version - allows an admin to push a solver hotfix mid-event without navigating away from the submissions view. Equivalent to the Solver page action.

Navigation flow from this page:

Submissions→Logs (inline)/DL source code/Upload solver fix

Component and Interactions annotations:

1. Top validation errors - ranked list of the most frequent submission rejection reasons. Helps admins identify if problem statement wording needs clarification.
2. AI-assisted insights - generates a structured post-event report summarising team performance, solver health, and participation trends using the platform AI.
3. Solver runtime trend chart - side-by-side comparison of solver versions to validate that a new deployment improved (or did not degrade) runtime performance.
4. Live stat cards - submissions per minute, active team count, solver failure count, and average solver runtime. All update in real time during the event.

Navigation flow from this screen:

Analytics→Generate report→Report download/preview
Solver→Solver management

3 Notifications:

Event	Team	Query	Reply
Entelect Challeng	ByteForce	Query no.2	Send

- Component and Interactions annotations:
- 1. Edit button - toggles the account form fields from read-only to editable. Changes are only persisted when Save changes is clicked
 - 2. Save changes - validates form, applies updates to account info and/or password. Displays inline success or error feedback without a page reload.
 - 3. Notifications panel - lists pending Q&A queries from teams requiring an admin reply. Send button opens a reply field inline for that specific query.

Navigation flow :

Admin profile→Edit → Save changes

Notifications → Send reply→Q&A forum

Register

2

Internal Dev Challenge

Apr 29 - May 2 - Private - 3 levels

Upcoming

Register with key

3

Component and Interactions annotations:

1. Event search - filters the open events list by name or tag. Interacts only with the "Open events" section, not the active event card.
2. Register (public) - one-click registration for public events. Adds the user to the event and redirects to the team page to join or create a team.
3. Register with key (private) - opens a modal prompting for a registration key. Validates the key server-side before admitting the participant.
4. Active event card - shows the participant's current event, team name, rank, and a live countdown. "Go to event" navigates to the event overview page.

Navigation flow from this screen:

Participant home → Go to event → Event overview / Register → Team page

Component and Interactions annotations:

- 1. Countdown timer
- 2. Freeze warning banner
- 3. Metric cards displaying Individual’s ranks, best score and submission number
- 4. Level progress tracker

Navigation Flow from this screen:

- Event detail → levels and Submit via “Re-Submit” button
- Event detail → My Team via sidebar
- Event detail → Learderboard via sidebar

Component and Interactions annotations:

1. Invite member - sends an email invitation to a new participant. Available only to the team lead. Invited users appear as Pending until they accept.
2. Team members list - displays avatar, name, email, and status (Active / Pending). Team lead is labelled. Pending members can be cancelled by the lead.
3. Join existing team - participants without a team can search open teams and send a join request. Requires team lead approval before status becomes Active.
4. Create new team - available to participants not yet in a team. Submitting the form creates the team and assigns the participant as team lead.

Navigation Flow from this screen:

Team page → Invite member (modal) / Levels & submit / Leaderboard

Component and Interactions annotations:

- 1. Level resources - downloadable input data and problem statement pdf. Download triggers a file transfer; View opens a PDF preview in-browser.
- 2. Solution output file - required upload (.txt, .csv, .json). The scoring engine compares this file against the expected output to compute the team score.
- 3. Source code archive - required .zip upload for audit and plagiarism check. Stored but not scored directly.
- 4. Submit button - disabled until both files are attached. On click, uploads files, queues scoring job, and redirects to Submission history showing a "Submitted" status.

Navigation Flow from this screen:

Levels & submit→Upload files→Submit→Submission history (auto)

Component and Interactions annotations:

1. Filter dropdowns - filter the history table by level (Level 1–N) and status (Scored / Error / Scoring). Compound filters compose without page reload.
2. Row actions - View logs opens an inline log panel for that submission. Download code retrieves the originally uploaded source archive (.zip).
3. Error log panel - inline expansion showing the error message for failed submissions. Download full log button exports the complete log as a .txt file.

Navigation Flow from this screen:

Submission history → Log viewer(inline) -expands in place, no navigation

Submission history → Levels & submit via sidebar to re-submit/download code

Component and Interactions annotations:

- 1. Level filter dropdown - switches leaderboard view between Overall (best cross-level score) and per-level rankings. Allows participants to see how they rank on specific levels.
- 2. "(you)" indicator - the current participant's team row is highlighted and labelled "(you)" for immediate self-location in the rankings, regardless of their position.

Navigation flow from this screen:

Leaderboard→Filter by level→Filtered rankings/Levels & submit (sidebar)

Component and Interactions annotations:

- 1. + Ask question - opens a modal with a level selector and text field. Submitted questions are visible to all participants and answered only by admins.
- 2. Level filter - filters the question list by level (All levels / Level 1 / Level 2, etc.) so participants can find relevant clarifications without scrolling through unrelated questions.
- 3. Question cards - each card shows the associated level tag, question text, and time posted. Clicking a card expands to show the official admin answer if one has been posted.

Navigation flow:

Q&A forum→Ask question (modal)→Question posted|Card click → Admin reply on admin profile page under notifications

Event History

Event	Team	Final Rank	Best Score
Entelect Challeng	ByteForce	#12	88,123

Component and Interactions annotations:

- 1. Edit button — unlocks all account fields for editing. While in edit mode, Save changes becomes active and a Cancel option appears to discard changes.
- 2. Save changes — persists account and password updates. Password change requires both fields to match; a mismatch shows an inline error before submission.
- 3. Event history table — read-only record of all past hackathon participations with team name, final rank, and best score. Grows with each completed event.

Navigation flow :

Participant profile→Edit → Save changes

Event history → Event overview
